Migration and Climate Change

Migration and Climate Change

Migration and Climate Change provides the first authoritative overview of the relationship between climate change and migration. It brings together both case studies and syntheses from different parts of the world and critically discusses empirical evidence, methodological challenges, conceptual gaps, policy responses, and normative issues. The book constitutes a unique and thorough introduction to one of the most discussed but least understood consequences of climate change and brings together experts from a wide range of disciplines, including anthropology, climatology, demography, geography, law, political science and sociology.
