## **Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science)** Michael R. Berthold, Christian Borgelt, Frank Höppner, Frank Klawonn

Each passing year bears witness to the development of ever more powerful computers, increasingly fast and cheap storage media, and even higher bandwidth data connections. This makes it easy to believe that we can now – at least in principle – solve any problem we are faced with so long as we only have enough data. Yet this is not the case. Although large databases allow us to retrieve many different single pieces of information and to compute simple aggregations, general patterns and regularities often go undetected. Furthermore, it is exactly these patterns, regularities and trends that are often most valuable. To avoid the danger of “drowning in information, but starving for knowledge” the branch of research known as data analysis has emerged, and a considerable number of methods and software tools have been developed. However, it is not these tools alone but the intelligent application of human intuition in combination with computational power, of sound background knowledge with computer-aided modeling, and of critical reflection with convenient automatic model construction, that results in successful intelligent data analysis projects. Guide to Intelligent Data Analysis provides a hands-on instructional approach to many basic data analysis techniques, and explains how these are used to solve data analysis problems. Topics and features: guides the reader through the process of data analysis, following the interdependent steps of project understanding, data understanding, data preparation, modeling, and deployment and monitoring; equips the reader with the necessary information in order to obtain hands-on experience of the topics under discussion; provides a review of the basics of classical statistics that support and justify many data analysis methods, and a glossary of statistical terms; includes numerous examples using R and KNIME, together with appendices introducing the open source software; integrates illustrations and case-study-style examples to support pedagogical exposition. This practical and systematic textbook/reference for graduate and advanced undergraduate students is also essential reading for all professionals who face data analysis problems. Moreover, it is a book to be used following one’s exploration of it. Dr. Michael R. Berthold is Nycomed-Professor of Bioinformatics and Information Mining at the University of Konstanz, Germany. Dr. Christian Borgelt is Principal Researcher at the Intelligent Data Analysis and Graphical Models Research Unit of the European Centre for Soft Computing, Spain. Dr. Frank Höppner is Professor of Information Systems at Ostfalia University of Applied Sciences, Germany. Dr. Frank Klawonn is a Professor in the Department of Computer Science and Head of the Data Analysis and Pattern Recognition Laboratory at Ostfalia University of Applied Sciences, Germany. He is also Head of the Bioinformatics and Statistics group at the Helmholtz Centre for Infection Research, Braunschweig, Germany.

**From reader reviews:**

**Richard Slawson:**

The actual book Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science) will bring you to definitely the new experience of reading the book. The author style to explain the idea is very unique. In case you try to find new book to study, this book very suitable to you. The book Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science) is much recommended to you you just read. You can also get the e-book from your official web site, so you can easier to read the book.

**Robert Jenkins:**

Your reading sixth sense will not betray you actually, why because this Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science) book written by well-known writer who really knows well how to make book which can be understand by anyone who all read the book. Written within good manner for you, still dripping wet every ideas and creating skill only for eliminate your current hunger then you still uncertainty Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science) as good book not merely by the cover but also through the content. This is one e-book that can break don't evaluate book by its protect, so do you still needing another sixth sense to pick that!? Oh come on your reading through sixth sense already alerted you so why you have to listening to a different sixth sense.

**Lawanda Beverly:**

What is your hobby? Have you heard which question when you got scholars? We believe that that issue was given by teacher with their students. Many kinds of hobby, Every person has different hobby. And also you know that little person including reading or as examining become their hobby. You need to know that reading is very important in addition to book as to be the point. Book is important thing to provide you knowledge, except your own personal teacher or lecturer. You discover good news or update in relation to something by book. Amount types of books that can you take to be your object. One of them are these claims Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science).

**Ross Turner:**

Some individuals said that they feel uninterested when they reading a e-book. They are directly felt it when they get a half elements of the book. You can choose the actual book Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science) to make your reading is interesting. Your skill of reading talent is developing when you just like reading. Try to choose basic book to make you enjoy to study it and mingle the opinion about book and reading especially. It is to be initially

opinion for you to like to open a book and read it. Beside that the publication *Guide to Intelligent Data Analysis: How to Intelligently Make Sense of Real Data (Texts in Computer Science)* can to be your brand new friend when you're sense alone and confuse in what must you're doing of that time.
